

NAME

osac2xrcf - convert rays from OSAC to XRCF coordinates

DESCRIPTION

osac2xrcf reads a ray stream in **bpipe** format, converts the coordinates into XRCF coordinates and writes the stream out.

The conversion from OSAC to XRCF is as follows:

$$\begin{aligned}x &= -z \\y &= -x \\z &= y\end{aligned}$$

Both positions and direction cosines are converted.

It writes out a **bpipe** formatted ray stream.

PARAMETERS

osac2xrcf uses an IRAF compatible parameter interface.

input *file*

Input ray stream. If the filename is the string `stdin`, it reads from the standard input stream. It accepts rays in **bpipe** format.

output *file*

Output ray stream. If the filename is the string `stdout`, it writes to the standard output stream. It writes rays in **bpipe** format.

version *boolean*

Print out **osac2xrcf**'s version and exit.

help *boolean*

Print out help and exit.

debug *list*

A list of debug flags. None are presently defined.
