__uninitialize

Context: [slangrtl](#)*Jump to:* [Description](#) [Example](#) [See Also](#)

Synopsis

Uninitialize a variable

Syntax

```
__uninitialize (Ref_Type x)
```

Description

The `__uninitialize` function may be used to uninitialize the variable referenced by the parameter `x`.

Example

The following two lines are equivalent:

```
( ) = __tmp(z);
__uninitialize (&z);
```
