

AHELP for CIAO 3.4

`_slangtrace`

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Turn function tracing on or off.

Syntax

```
Integer_Type _slangtrace
```

Description

The `_slangtrace` variable is a debugging aid that when set to a non-zero value enables tracing when function declared by `_trace_function` is entered. If the value is greater than zero, both intrinsic and user defined functions will get traced. However, if set to a value less than zero, intrinsic functions will not get traced.
