AHELP for CIAO 3.4

errno_string

Context: slangrtl

Jump to: Description Example See Also

Synopsis

Return a string describing an errno.

Syntax

```
String_Type errno_string (Integer_Type err)
```

Description

The errno_string function returns a string describing the integer error code err. The variable err usually corresponds to the errno intrinsic function. See the description for errno for more information.

Example

The errno_string function may be used as follows:

```
   define sizeof_file (file)
   {
      variable st = stat (file);
      if (st == NULL)
        verror ("%s: %s", file, errno_string (errno));
      return st.st_size;
   }
```

See Also

slangrtl

errno, error, fclose, getcwd, mkdir, rename, verror, vmessage
