AHELP for CIAO 3.4

fprintf

Context: slangrtl

Jump to: Description See Also

Synopsis

Create and write a formatted string to a file

Syntax

```
Int_Type fprintf (File_Type fp, String_Type fmt, ...)
```

Description

fprintf formats the objects specified by the variable argument list according to the format fmt and write the result to the open file pointer fp.

The format string obeys the same syntax and semantics as the sprintf format string. See the description of the sprintf function for more information.

fprintf returns the number of characters written to the file, or −1 upon error.
