

AHELP for CIAO 3.4

mul2

Context: [slangrtl](#)*Jump to:* [Description](#) [See Also](#)

Synopsis

Multiply a number by 2

Syntax

```
y = mul2(x)
```

Description

The `mul2` function multiplies an arithmetic type by two and returns the result. If its argument is an array, a new array will be created whose elements are obtained from the original array by using the `mul2` function.
