

AHELP for CIAO 3.4

path_concat

Context: [slangrtl](#)

Jump to: [Description](#) [See Also](#)

Synopsis

Combine elements of a pathname

Syntax

```
String_Type path_concat (String_Type dir, String_Type basename)
```

Description

The path_concat function combines the arguments dir and basename to produce a pathname. For example, on unix if dir is x/y and basename is z, then the function will return x/y/z.
