## **Synopsis**

A 2-D instrument model utilizing an exposure map and point-spread function.

## **Description**

RSP2D is used to model instrument response with an exposure map and point-spread function (PSF).

Note the following:

- The exposure map image must have the same size as the data image, and it must have the same plate-scale (i.e., bins in each image must have the same size in arc-seconds, etc.).
- The exposure map and PSF images need not have the same size, but both must have the same plate-scale.

See the documentation on the INSTRUMENT command. See also the FARF2D and FPSF2D instrument models, for a fuller explanation of the parameters.

### **RSP2D Parameters**

<b>Number</b>	<b>Name</b>	<b>Description</b>
1	psffile	PSF file name
2	xsize	x-full-width of the subset region of the PSF file to use in convolution
3	ysize	y-full-width of the subset region of the PSF file to use in convolution
4	xoff	x-direction offset
5	yoff	y-direction offset
6	fft	convolution type: 1 = FFT / 0 = sliding cell
7	empfile	exposure map file name

## **Bugs**

See the [Sherpa bug pages](#) online for an up-to-date listing of known bugs.
