

AHELP for CIAO 3.4

sleep

Context: [slangrtl](#)

Jump to: [Description](#)

Synopsis

Pause for a specified number of seconds

Syntax

```
sleep (Double_Type n)
```

Description

The sleep function delays the current process for the specified number of seconds. If it is interrupted by a signal, it will return prematurely.

Not all system support sleeping for a fractional part of a second.

The Chandra X-Ray Center (CXC) is operated for NASA by the Smithsonian Astrophysical Observatory.
