Bugs: dmimgcalc

Bugs

1. ***dmimgcalc*** *creates an incorrect LIVETIME keyword in the output file.*

   Users may need to modify the value of this keyword manually using dmhedit.

2. ***Boolean operators − such as < and > − are not working on arrays (e.g. images).***

   Note that threshold conditions may be more easily applied by using dmimgthresh instead of this tool.

3. ***dmimgcalc corrupts the file history*** *(07 Mar 2008)*

   dmimgcalc corrupts the history records in the file header, duplicating previous history entries.

4. ***Status is not set on error.*** *(07 Mar 2008)*

   There are several instances where the dmimgcalc exit status is set to 0, even when the command was not successful.
