

Other command–line tools used often

[Back to the Survey](#)

- 9 - dmhedit

- 12 - The data reduction tools, *_process_events, tg_resolve_events, and the like.

- 15 - mkrmf, mkarf, dmextract

- 18 - mkarf, mkgarf, dmextract, tg_resolve_events, acis_process_events, tgextract
I use slang, but as embedded in isis.

- 19 - dmextract, mkrmf, mkarf, merge_all. I don't use psextract because it does some things wrong and does many things in an undesirable way (e.g. it provides no options for binning background spectra but uses a default, entirely useless binning of 1:1024:20).

- 21 - dmextract, mkrmf, mkwarf, dmhedit, mkeypar (and related tools)

- 22 - dmextract, wavdetect, mkexpmap

- 23 - reproject_events, dmmerge, dmhedit, acis_process_events, acisreadcorr, destreak, dmimgcalc, dmstat, plist, pset.

- 24 - mkarf and the apply_acisabs correction
acis_process_events

- 25 - destreak
dmcoords
acis_process_events
dmextract
dmhedit
dmregrid
mkexpmap
mkinstmap
mkwarf
mkrmf

- 27 - Not clear what this means. I'll use any unix cl commands; idl and ftools for astronomy-specific work; isis for spectral analysis; I am learning how to use S-lang, too.

- 30 - dmextract, mkarf, mkwarf

- 32 - apply_acisabs, acisspec

- 33 - mkgarf, mkarf, mkrmf, mkinstmap, mkexpmap, asphist, dmextract, acis_process_events, wavdetect
