

I/O Bugs: save

Bugs

1. *XSpec commands which aren't recorded in the save file.*

The `xspec abundan` and `xspec xsect` commands are not recorded in the save file. If a fit is saved and then restored, the fit and statistics appear to be completely different.

2. *The "save all" command will not correctly save information for a dataset whose axis (or axes) has been created using the `set_axes()` function.*

On Mac OS X systems, it will cause *Sherpa* to crash.

The Chandra X-Ray Center (CXC) is operated for NASA by the Smithsonian Astrophysical Observatory.
