

I/O Bugs: show

Bugs

1. *There are insignificant differences in Sherpa show output depending on whether the PAGER environment variable is set to "more" or "less -s".*
2. *The show command is confused after sherpa_eval is used with read filter.*

For example:

```
sherpa> data img.fits
sherpa> () = sherpa_eval( "read filter 1 sfilt.fits fits" )
sherpa> show
...Current filters for dataset 1:
( read filter 1 sfilt.fits fits
Noticed filter size: 38204 bins
...
```

Note the incorrect open parenthesis at the beginning of the filter specification.

The Chandra X-Ray Center (CXC) is operated for NASA by the
Smithsonian Astrophysical Observatory.
