S−lang−related Bugs: register_model

Bugs

1. ***Missing comma in array input leads to a segmentation fault.***

   If one uses arrays within a call to the `register_model` function, e.g.

   ```
   () = register_model("blah",["par1","par2"...],...)
   ```

   and one leaves a comma out of an array, there is not an immediate indication of an error, but rather the session suffers a slow death ending in a randomly−placed segmentation fault.
