⁵ Univ. of Warwick, ⁶ Harvard-Smithsonian Center for Astrophysics, ⁷ Univ. of Alberta

The GBS goals are constraining:

- **Black-hole formation and neutron star Equation of State.**

Finding (eclipsing) low-mass X-ray binaries in quiescence.

The GBS goals are constraining:

- **Black-hole formation and neutron star Equation of State.**
Finding (eclipsing) low-mass X-ray binaries in quiescence.
- **Common envelope phase in binary evolution.**
Comparing the number of observed sources in each source class with predictions.

The GBS goals are constraining:

- Black-hole formation and neutron star Equation of State.

Finding (eclipsing) low-mass X-ray binaries in quiescence.

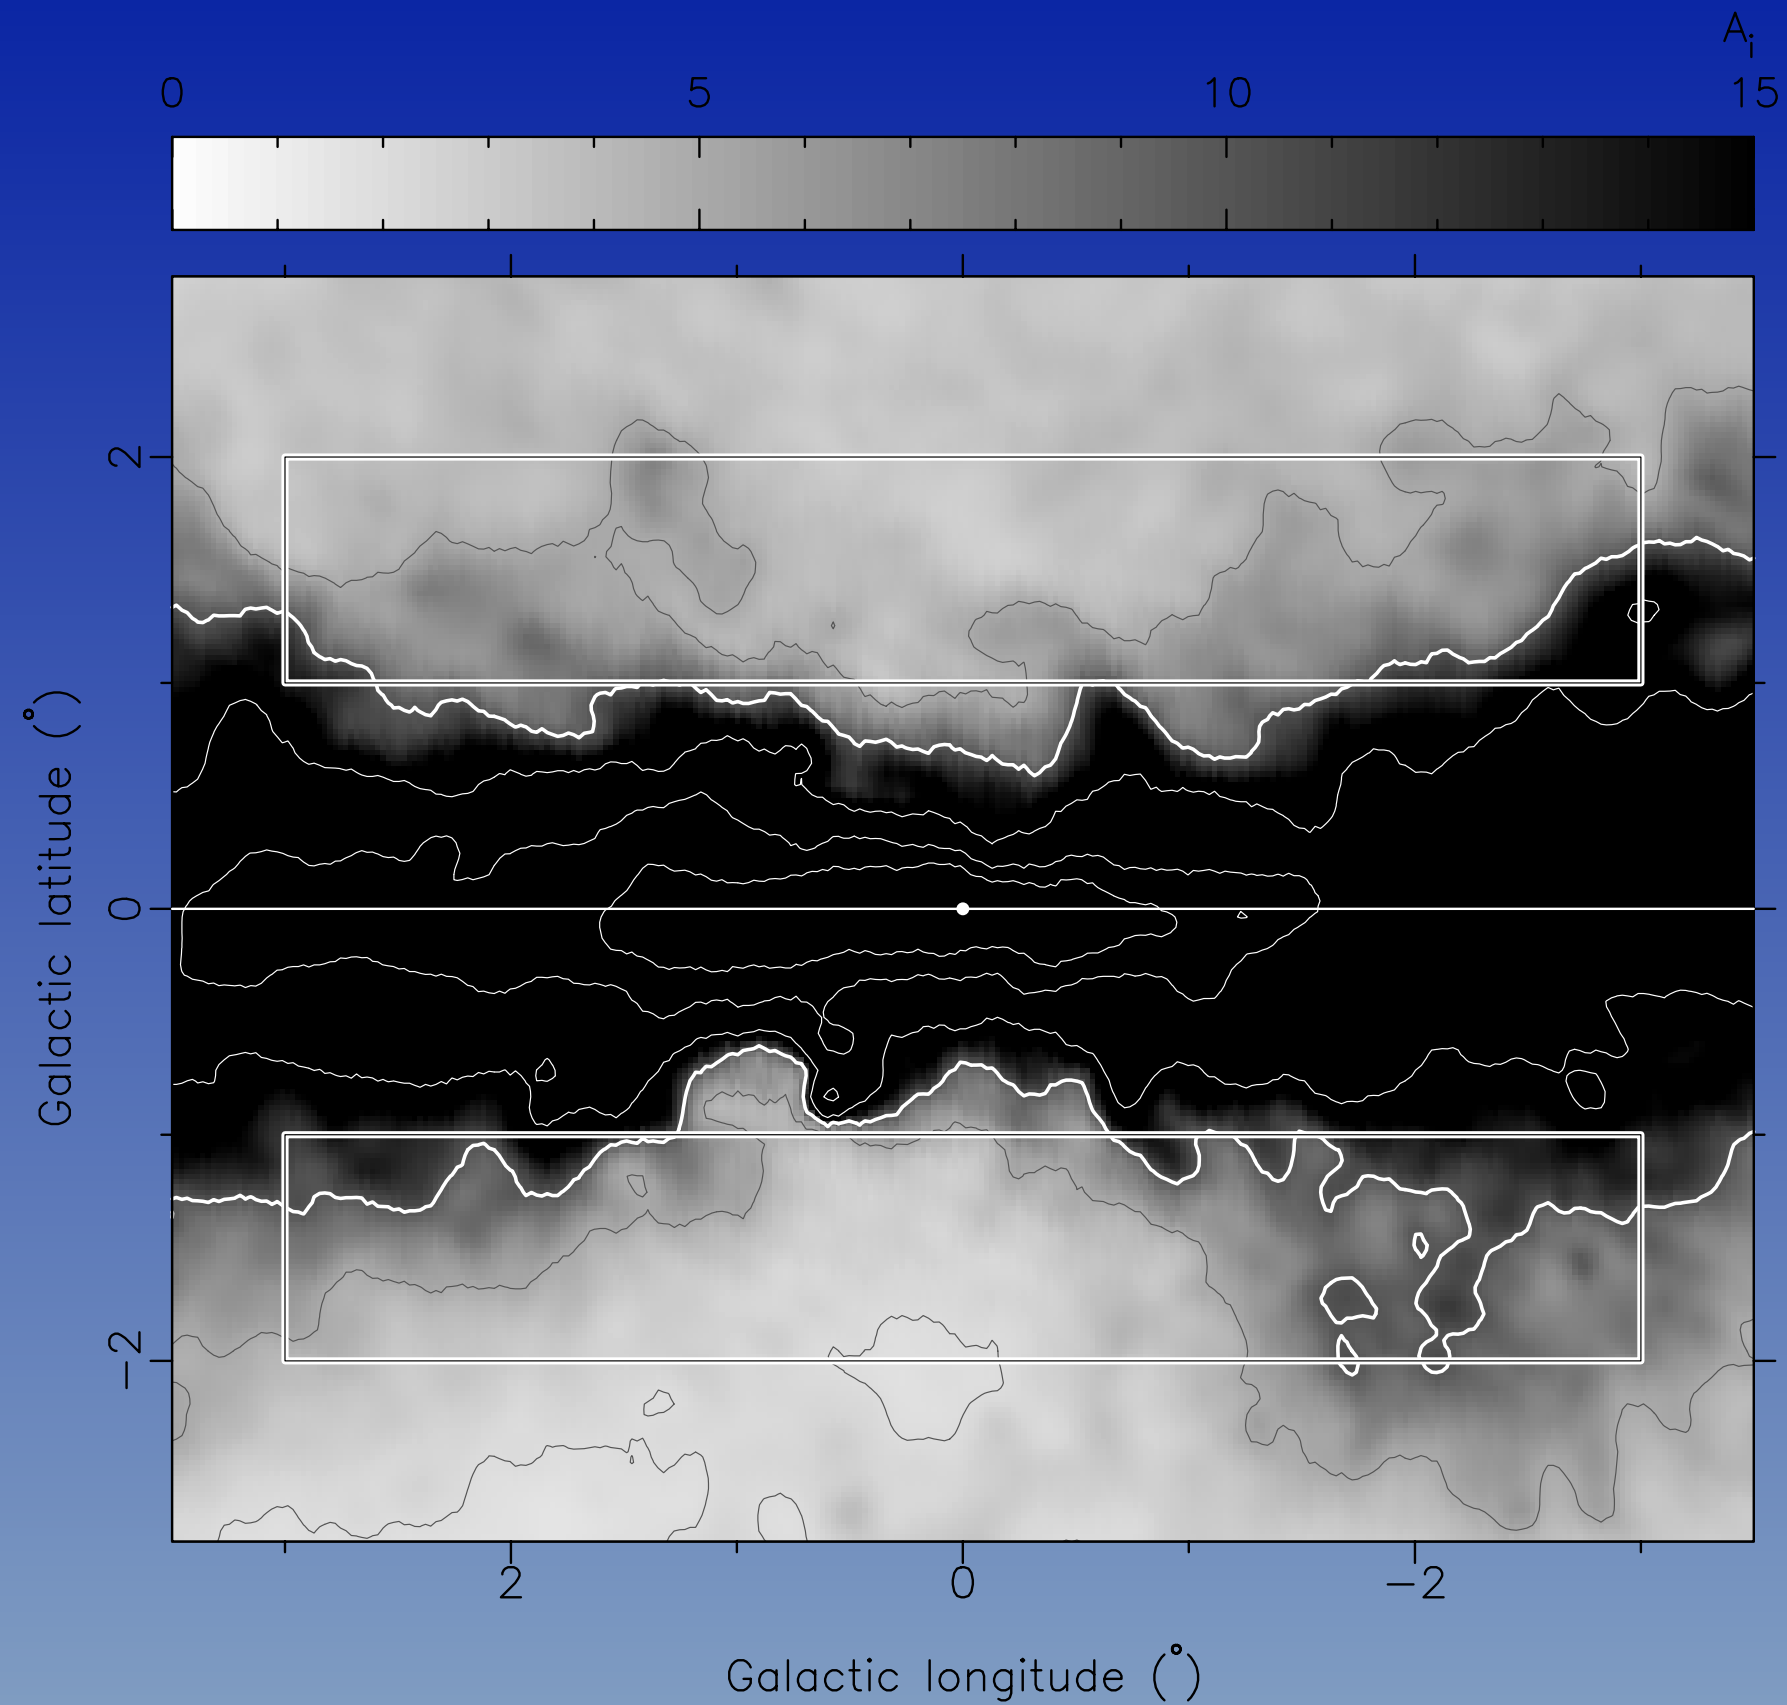

- Common envelope phase in binary evolution.

Comparing the number of observed sources in each source class with predictions.

- Finding progenitors to SN Type Ia.

Deriving the (magnetic) white dwarf mass distribution in CVs

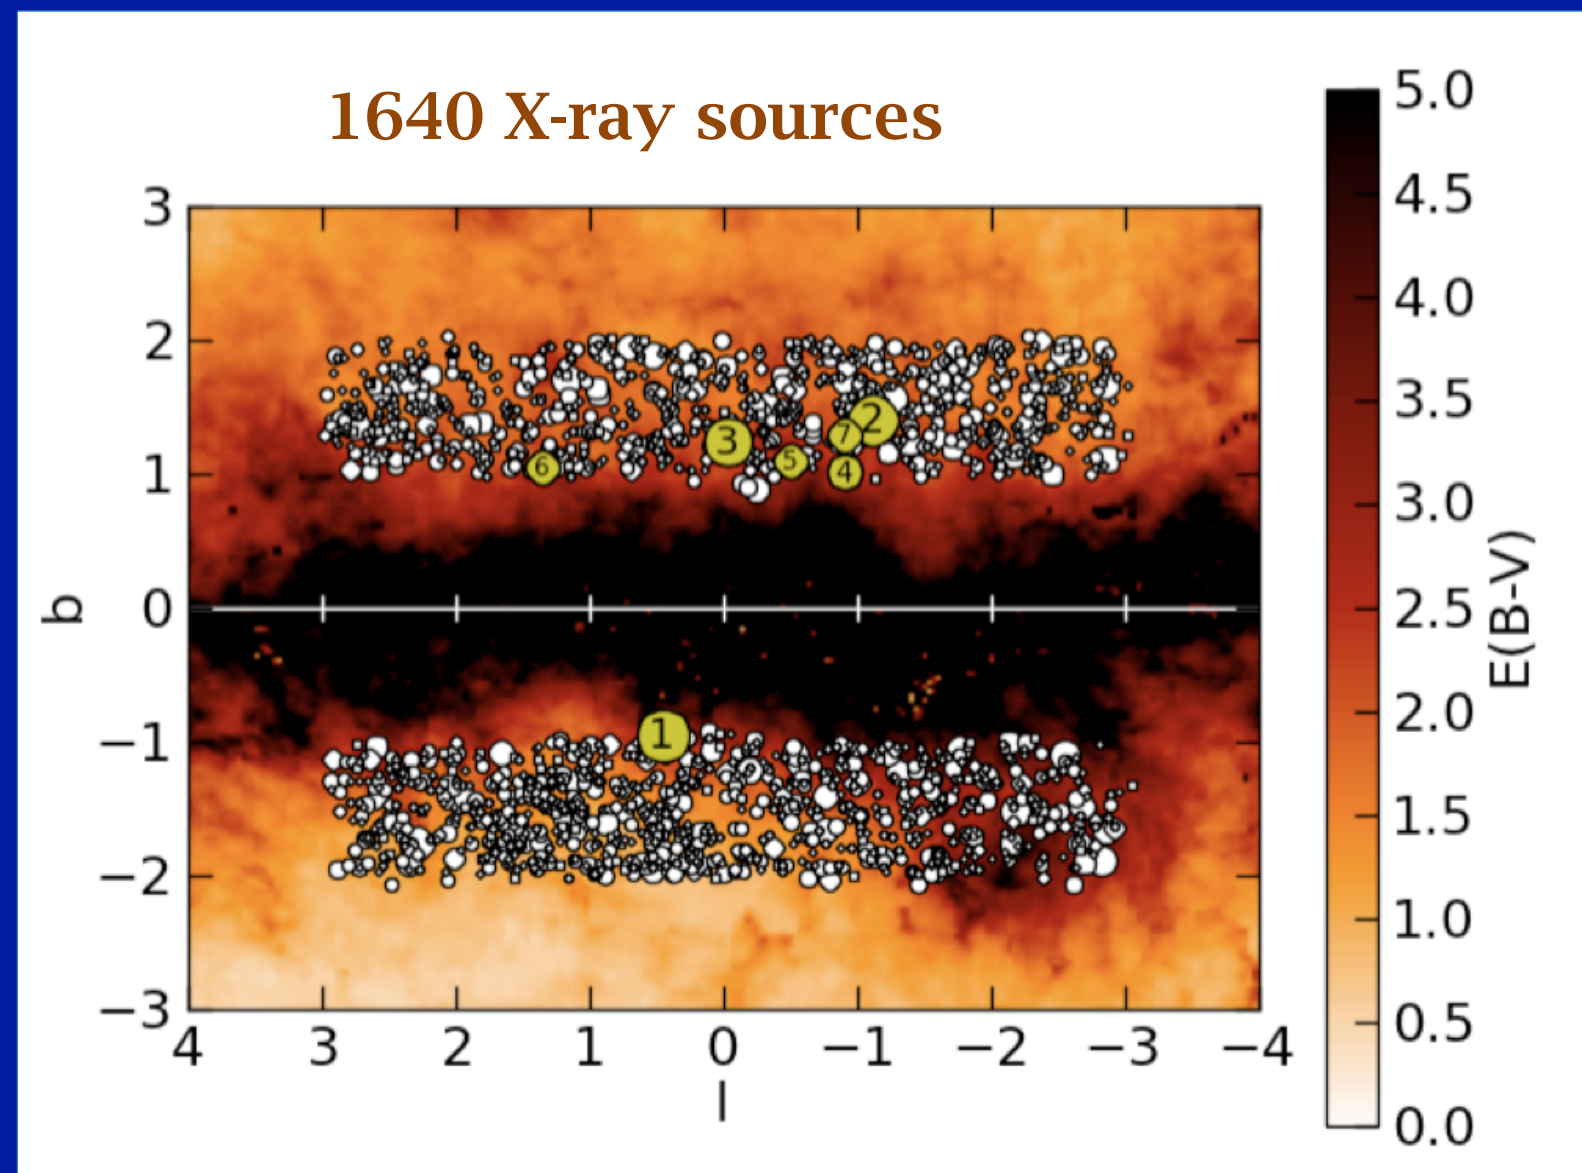

The GBS area:

**Extinction
map
i-band**

A multi-wavelength project: X-ray survey.

- Sensitive to faint sources and excellent position accuracy.
- 260 observations. 2 ks each.

The majority of sources are 3 count detections.

A multi-wavelength project: optical survey.

- $r', i' < 23$ and H_α imaging with **Mosaic-II**.
- **Mosaic-II** and **DECam** time-resolved photometry.

A multi-wavelength project: optical survey.

- $r', i' < 23$ and H_{α} imaging with **Mosaic-II**.
- **Mosaic-II** and **DECam** time-resolved photometry.
- Spectroscopy with **VIMOS** (VLT), **EFOSC2** (NTT), **GMOS** (Gemini).

First Results

X-RAY SURVEY

- 1.- The Galactic Bulge Survey: Outline and X-ray Observations (Jonker et al. 2011)
- 2.- The Galactic Bulge Survey: Completion of the X-Ray Survey Observations (Jonker et al. 2014)

SHALLOW PUBLIC SURVEYS

- 3.- Identification of Galactic Bulge Survey X-Ray Sources with Tycho-2 Stars (Hynes et al. 2012)
- 4.- Radio sources in the Chandra Galactic Bulge Survey (Maccarone et al. 2012)

NEAR-INFRARED SURVEY

- 5.- Near-infrared counterparts to the Galactic Bulge Survey X-ray source population (Greiss et al. 2014)

OPTICAL (VARIABILITY) SURVEY

- 6.- Variability of Optical Counterparts in the Chandra Galactic Bulge Survey (Britt et al. 2014)

OPTICAL (SPECTROSCOPY) SURVEY

- 7.- Identification of 23 accreting binaries in the Galactic Bulge Survey (Torres et al. 2014)
- 8.- Identification of Five Interacting Binaries in the Galactic Bulge Survey (Britt et al. 2013)
- 9 Gemini Spectroscopy of Galactic Bulge Sources: A Population of Hidden Accreting Binaries Revealed? Wu et al. submitted.

INDIVIDUAL SOURCES

- 10.- HD 314884: a slowly pulsating B star in a close binary (Johnson et al. 2014)
- 11.- CXOGBS J174444.7-260330: a new long orbital period cataclysmic variable in a low state (Ratti et al. 2013)
- 12.- CXOGBS J173620.2-293338: A Candidate Symbiotic X-Ray Binary Associated with a Bulge Carbon Star (Hynes et al. 2014)

INDIVIDUAL OBJECTS

CX44 (=AX J1755.7-2818): quiescent LMXB or CV

Photometric long-term variability and $L_x = 1e^{32}$ erg/s

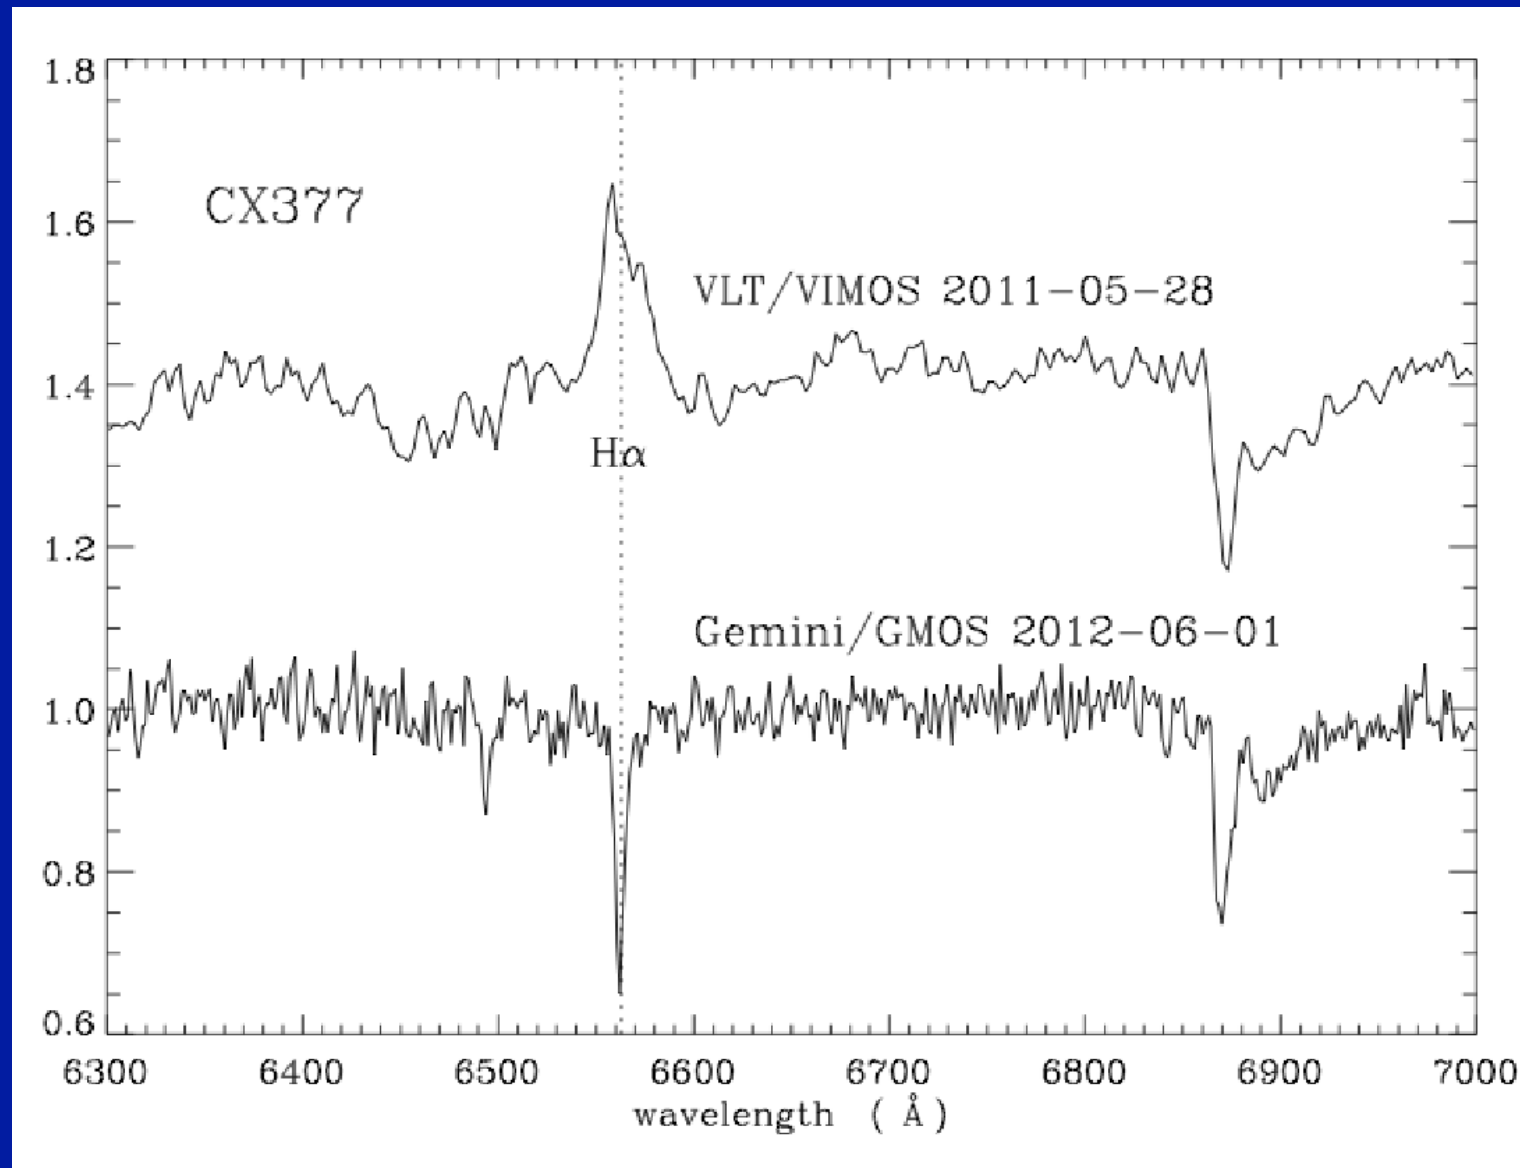

Mosaic-II shows
flickering

DECam shows
modulation

CX377: a likely quiescent LMXB

H α long-term variability.

F-type companion.

High extinction (distant)

$$L_x = 8e^{32} \text{ erg/s}$$

H α : FWHM = 1200 km/s

Unveiling accreting binaries (Wu et al. 2014)

Optimal subtraction of spectral template to objects that do not show H α in emission.

H α : FWHM = 660 km/s

H α : FWHM = 1350 km/s

CX332: a candidate symbiotic X-ray binary

At Bulge distance: $L_x = 2e^{32}$ erg/s.

CX1004: a quiescent black hole LMXB?

H α profile consistent with a BH LMXB or eclipsing CV.

M-type companion. Low extinction (nearby). $L_x = 2e^{30}$ erg/s

H α : FWHM = 2100 km/s
 $\Delta v = 1170$ km/s.

DECam shows
flickering

The GBS Predictions

The GBS predictions and strategy:

Survey upper limit:

$$F_x = (1-3)e^{-14} \text{ erg/s/cm}^2$$

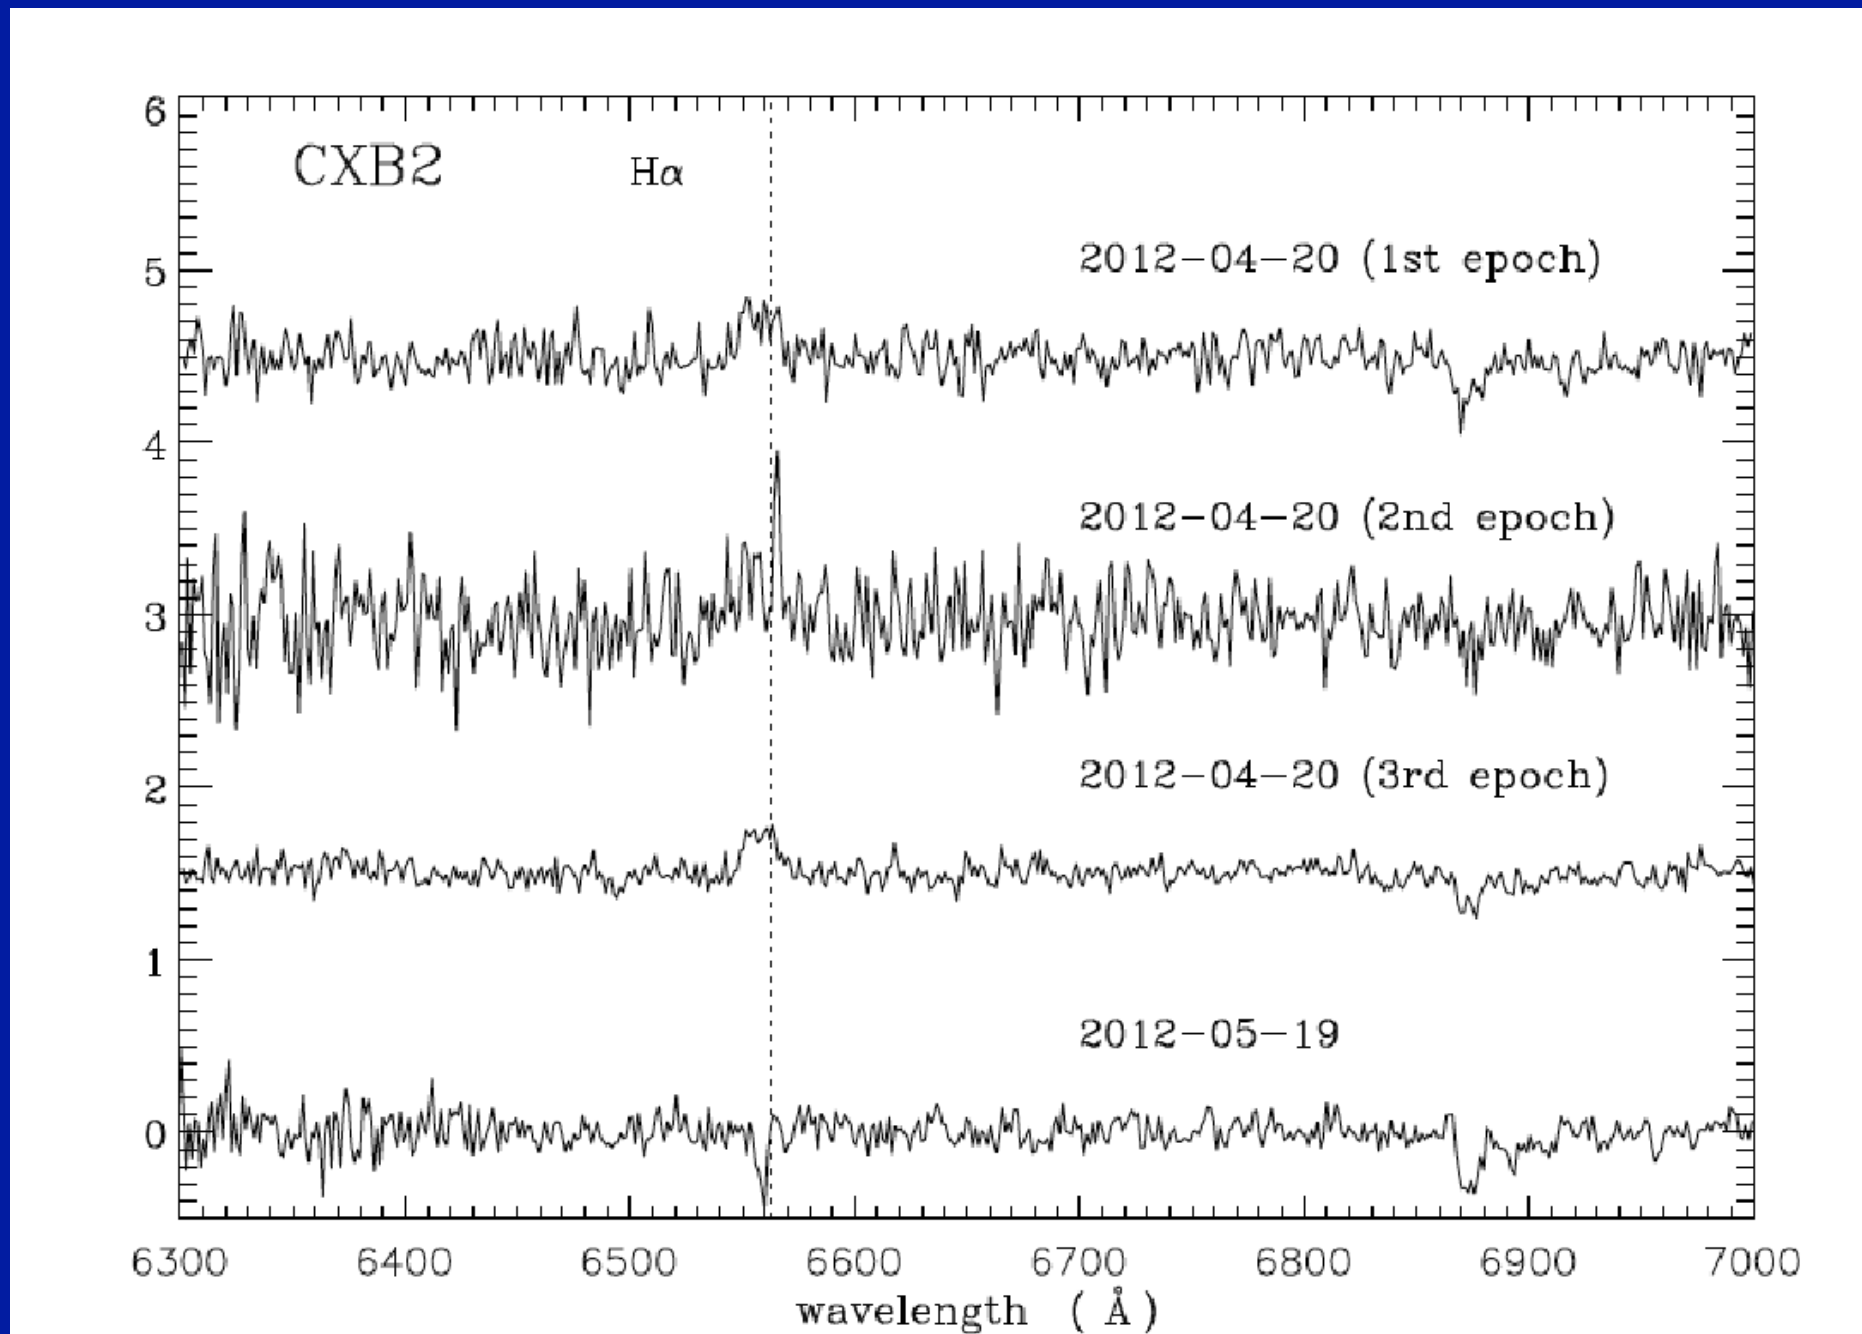

$$(L_x = (1-3)e^{31} (d/1 \text{ kpc})^2 \text{ erg/s})$$

Number of non-magnetic CVs, intermediate polars and quiescent LMXBs

H α long-term variability:

H α long-term variability:

Tores et al. (2014)

SDSS J102347.6+003841

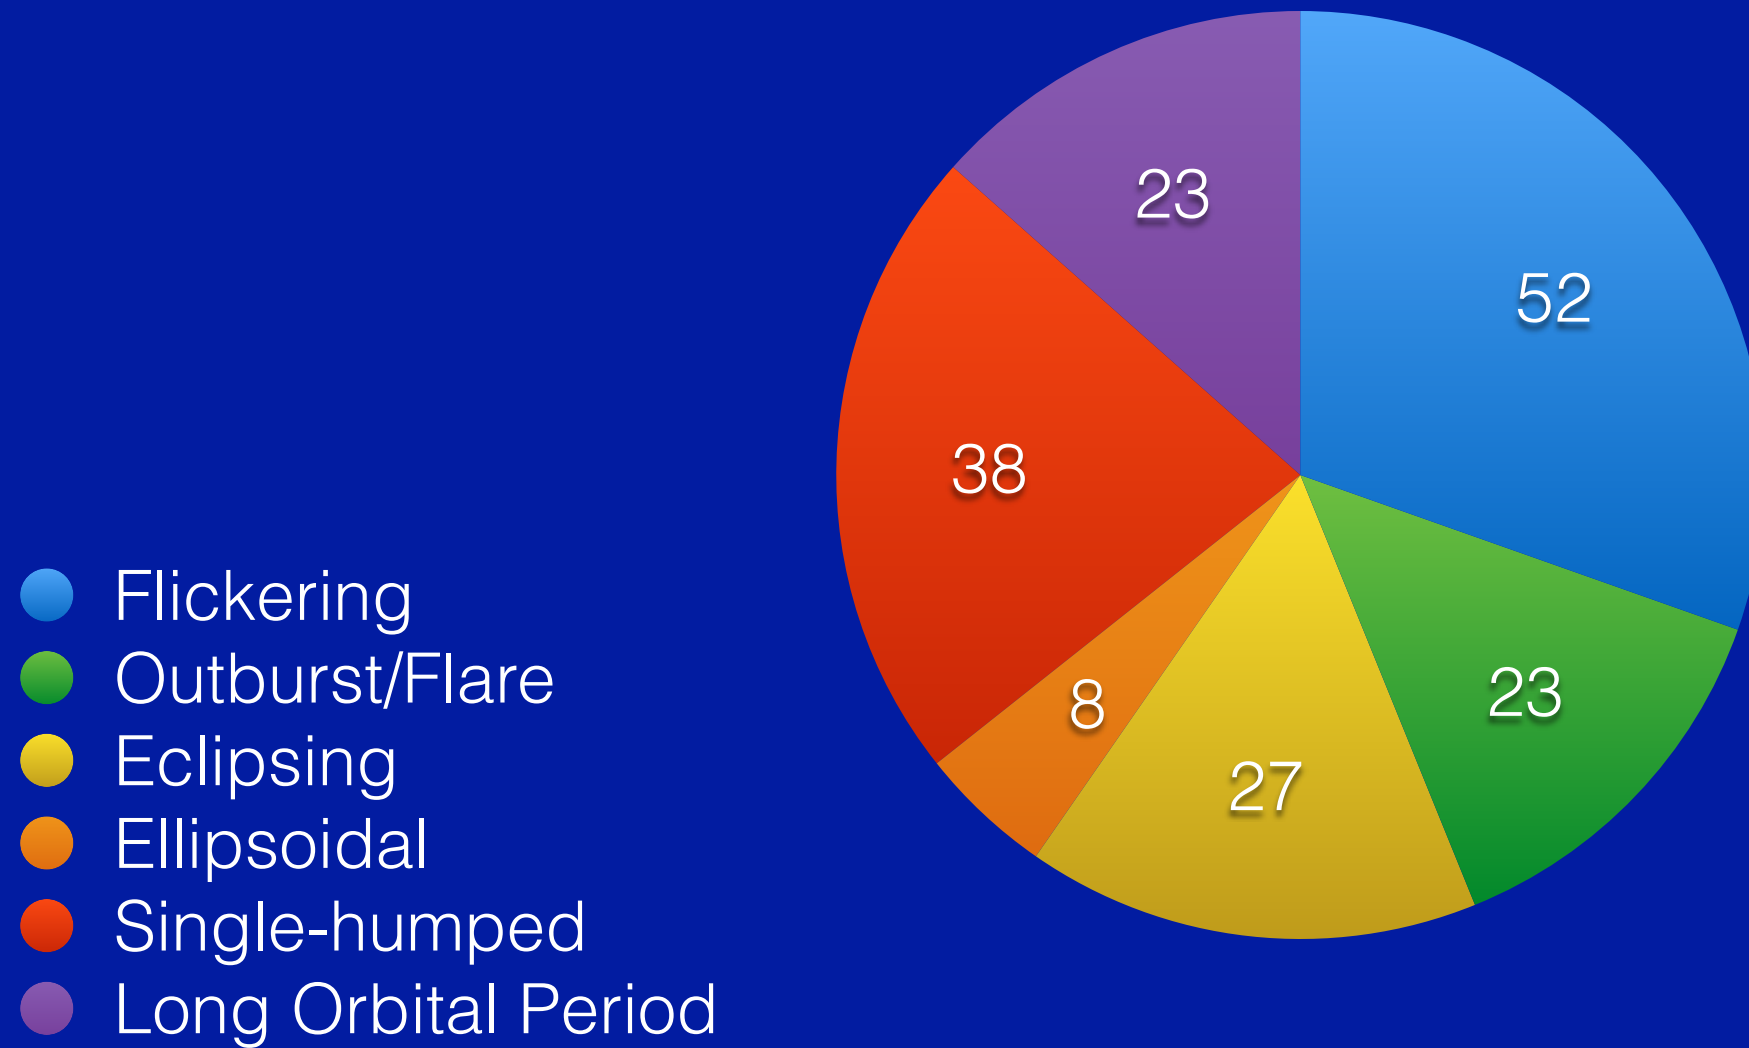

SDSS J102347.6+003841

A variability project: optical

168 optical variables

Britt, Hynes et al. (2014)

Mass compact object:

$$M_1 = \frac{P_{\text{orb}}}{2\pi G} \left(\frac{1+q}{q} \right)^2 \frac{K_2^3}{\sin^3 i},$$

K_2, P

$q = M_2/M_1$

inclination, i

$$V_R = \gamma + K_2 \left[\sin \frac{2\pi}{P} (t - T_0) \right],$$

K_2

$$\frac{v \sin i}{K_2} = 0.462 [(1+q)^2 q]^{1/3}.$$

K_2, P, T_0

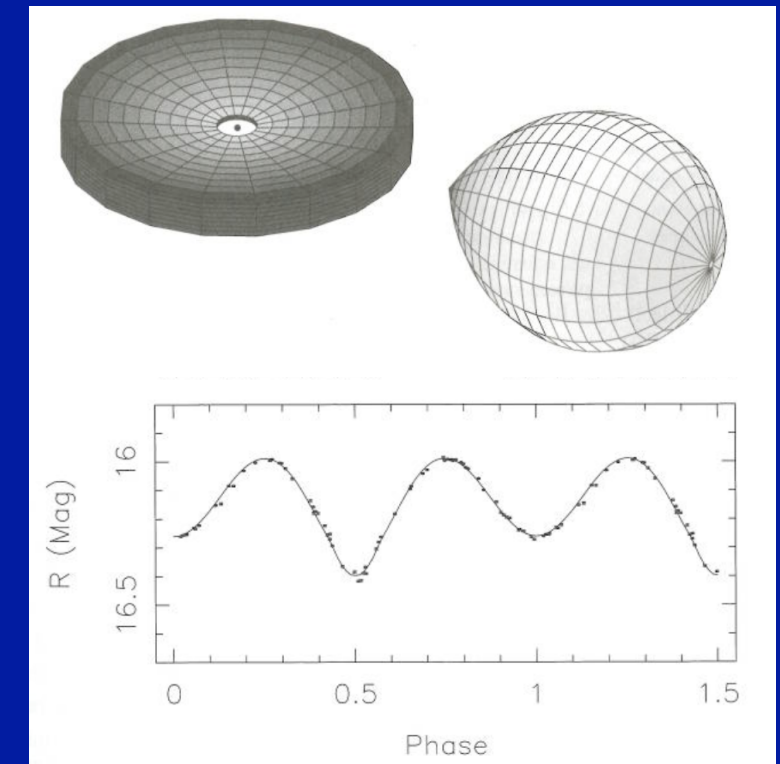

f
sp. type

Radial velocity curve (V_r)

Optimal subtraction ($v \sin i$, *sp. type*, f)

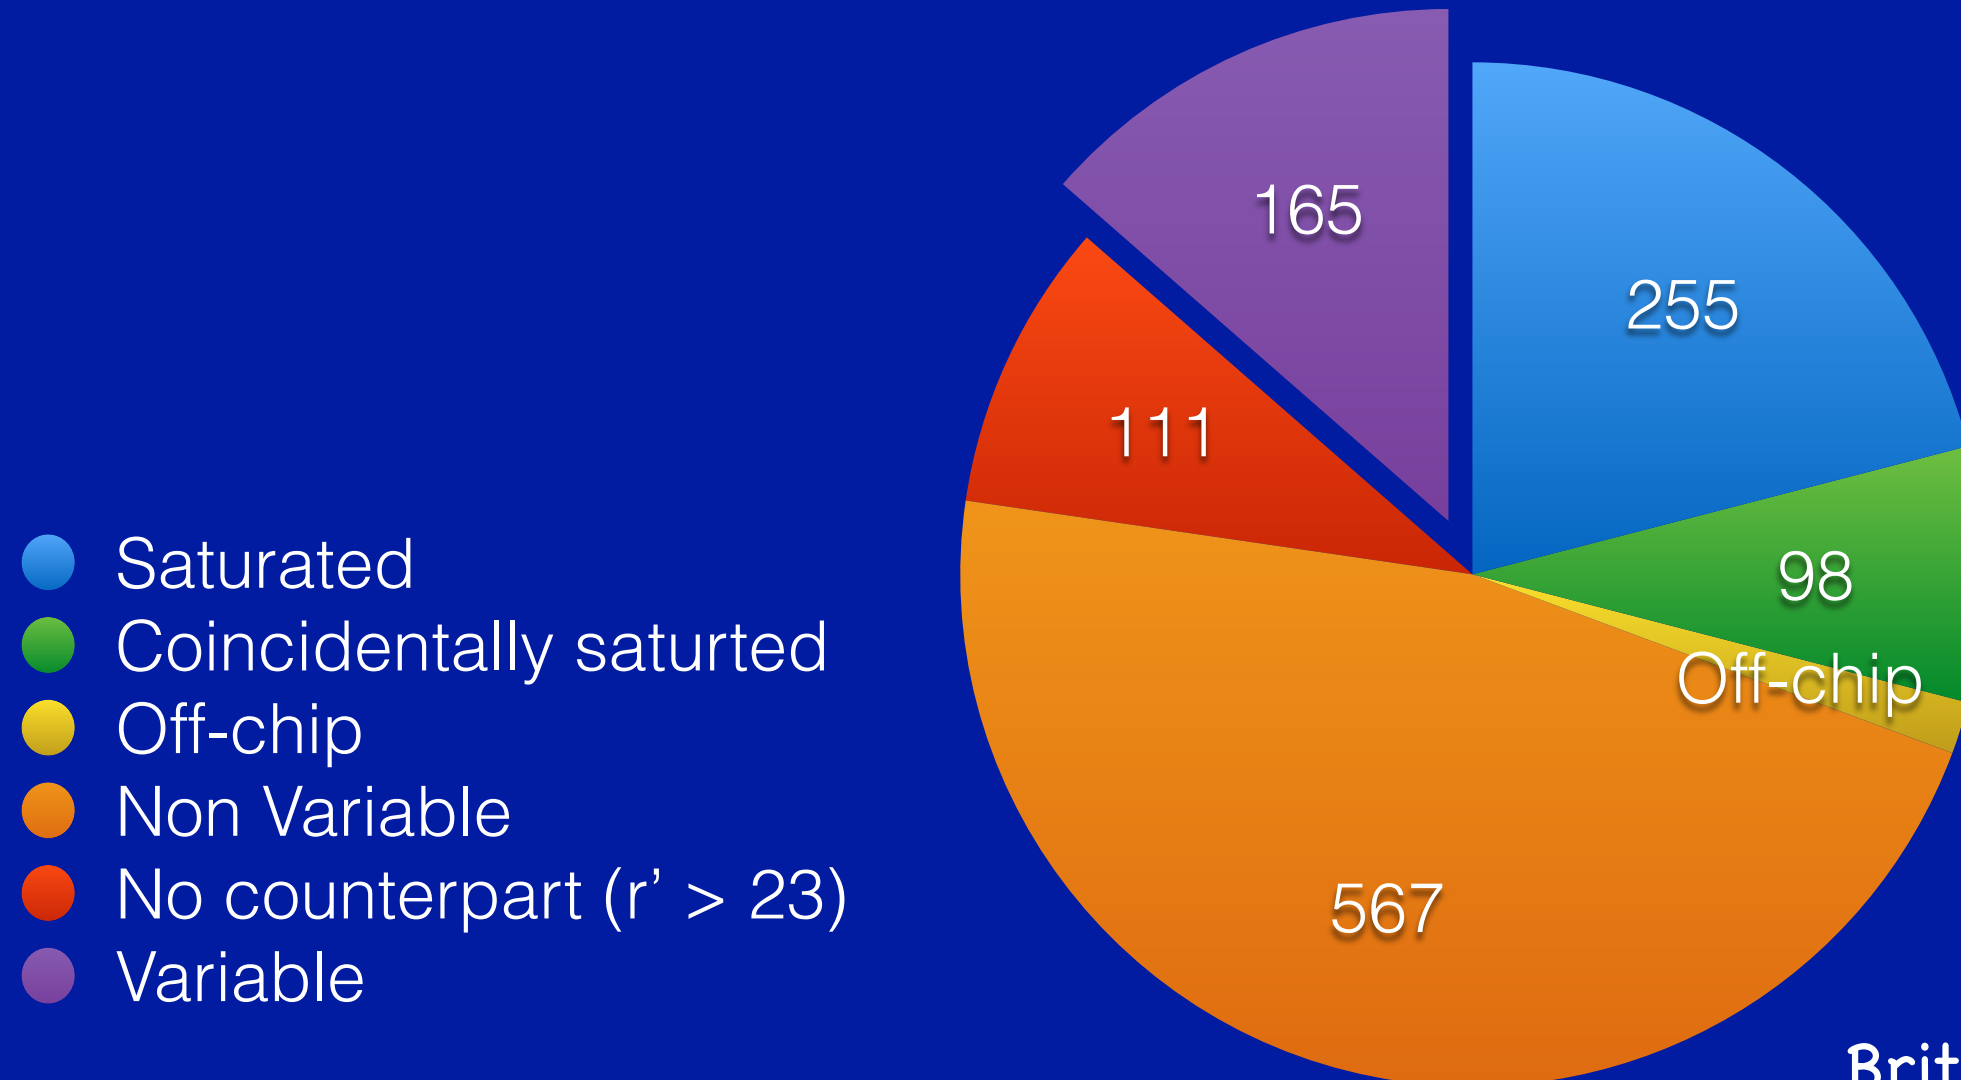

Light Curve modelling (i)

A variability project: optical

- Blanco 4m/Mosaic-II. r'-band only. 12-18 July 2010. Covering 3/4 of the GBS area ($16 < r' < 23$).

1234 X-ray sources:

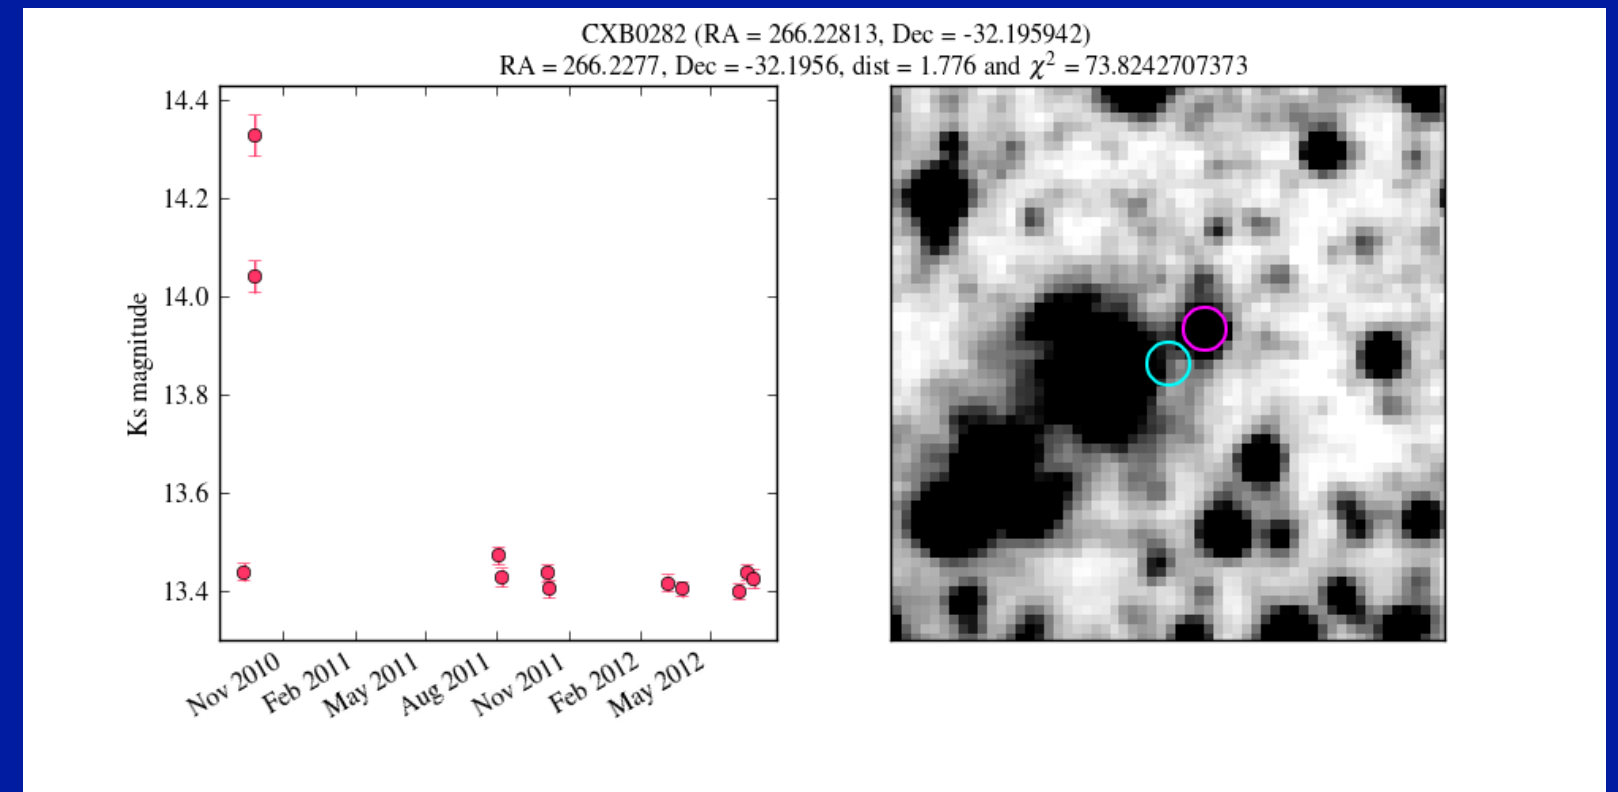

Britt, Hynes et al. (2014)

Variability not enough to confirm counterparts.

A variability project: infrared

- VVV/UKIDSS GPS/2MASS comparison. Greis, Steeghs et al. (2013).

donor star dominated light curves
